DESCRIPTORS: *Cellulose, Rayon, Production,
*Sulfur, Recovery, Separation, *Synthetic fibers.

We have studied the sources of sulfur losses in the individual phases of the manufacture of viscose staple of the cotton type. We determined the proportions of sulfur lost, relative to the total amount of sulfur added to the manufacturing process. However, the actual amount of sulfur regenerated did not correspond to the sum of the amounts of sulfur amenable to regeneration at the various process steps. Therefore, by improving the conditions in the individual process steps where losses (Materials--Textiles, TT, v. 6, no. 7) (over)
